1. What is the Content Deployment Library?

This library provides a simple framework that automates the promotion of content from one environment to another. This automation extracts content from a repository, packages it, and deploys it to target environments using one standardized end-to-end process.

2. Download the Content Deployment Library

Latest version of Content Deployment Library is: 0.9

You can get the Content Deployment Library from the [ModuleForge download site](#) (hosted by SourceForge.net)
