1. What is the RDB Data Deployment Library?

This library provides a simple framework that automates the promotion of data from one environment to another. This automation exports data from a source database schema, packages it, deploys and imports it to target database schemas using one standardized end-to-end process.

2. Download the RDB Data Deployment Library

Latest version of RDB Data Deployment Library is: 0.9

You can get the RDB Data Deployment Library from the [ModuleForge download site](#) (hosted by SourceForge.net)
