

Installing from project archive file

Table of contents

- 1 Overview.....2
- 2 Instructions.....2
- 3 Next step 2

1. Overview

2. Instructions

1. Follow the [general instructions](#) to prepare for installation from project archive file.
2. Download version 0.9 of the [Headlines project archive](#).
3. In Workbench [unarchive](#) the project archive file.
4. At the command line, run AntDepo's depot-setup command to register your node with the headlines project in Workbench. The -a flag defines the action for the depot-setup command (in this case, create).

```
$ depot-setup -p headlines -a create
.
.
.
Calling Get-Properties from the Managed-Entity module for node:
localhost
```

5. Download version 0.9 of the Headlines Zip file from [ModuleForge](#) and unpack it into your CTIER_ROOT.

3. Next step ...

- You are now ready for the [Tutorial](#).
